

HIMANSHU KHATRI

Product Manager — Enterprise SaaS | AI-Assisted Product Development

hkhatrih0@gmail.com | +91-8950752997 | Bengaluru, India | [LinkedIn Profile](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Product Manager with 3+ years delivering enterprise B2B SaaS products across procurement automation, accounts payable, and pharma quality management. Scaled the InLumin platform to 500+ active users across 3 organisations, achieving 95% adoption. Digitised a client procurement process handling 1,000+ monthly approvals, cut manual steps from 18 to 10 (44% reduction), and freed the SCM team to redirect 20% of their daily effort to strategic work. Experienced in full product lifecycle — discovery, roadmapping, Agile delivery, enterprise integration (SAP), and go-to-market execution. Proven at turning complex enterprise workflows into scalable digital products with measurable operational impact.

CORE COMPETENCIES

Product Strategy: Product Roadmapping, Product Discovery, User Research, MoSCoW Prioritisation, Competitive Analysis, Go-To-Market Planning

Execution & Delivery: Agile / Scrum, Sprint Planning, Backlog Management, PRD / BRD / User Stories, Acceptance Criteria, Release Management

Enterprise Platforms: Procure-to-Pay (P2P), Accounts Payable Automation, ERP (SAP - ECC and HANA), Workflow Automation

Data & Analytics: KPI Definition & Tracking, Product Metrics

Design & Prototyping: Figma and Firebase (UI creating Review, AI-Assisted Prototyping), User Flow Design, Usability Testing

Tools: Jira, Confluence, Figma, Microsoft Excel, Firebase, Replit, Google AI Studio

WORK EXPERIENCE

Product Manager (Senior Associate) | Arcolab – Bengaluru, India | *June 2023 – Present*

Product Strategy & Discovery

- Owned end-to-end product roadmap for two enterprise SaaS platforms — a Procure-to-Pay (P2P) system and an AP Document Management tool — by conducting discovery interviews and stakeholder workshops across finance, procurement, and operations teams, resulting in a prioritised backlog that aligned product direction with top business pain points.
- Reduced requirement clarification cycles by 20% and improved sprint predictability by authoring structured BRDs, user stories, and acceptance criteria using MoSCoW prioritisation, enabling engineering teams to begin development with fewer back-and-forth loops.
- Tracked product health using KPIs including platform adoption rate, procurement cycle time, and compliance adherence — monitored via Excel dashboards and Jira analytics — to surface early signals and adjust roadmap priorities on a quarterly basis.

Product Delivery & Agile Execution

- Led all Agile ceremonies — sprint planning, backlog grooming, and release management — for a cross-functional team using Jira and Confluence, and maintaining product documentation.
- Reviewed UI designs in Figma before every engineering handoff, catching an average of 5+ usability issues per sprint and reducing post-release design rework, saving re-development cycles across quarterly releases.
- Accelerated stakeholder alignment by 25% on key feature decisions by building rapid AI-assisted prototypes using Figma AI and Firebase, replacing static slide decks with interactive demos that shortened approval cycles.

Client Implementation & Go-To-Market

- Planned and executed go-to-market strategy for the InLumin enterprise platform across 3 organisations — covering internal enablement, change management, training programmes, and phased rollout — scaling to 500+ active users and achieving 95% adoption within the initial launch period.
- Digitised a client's end-to-end procurement process by mapping their 18-step manual workflow, configuring InLumin to handle 1,000+ monthly PR and invoice approvals, and rewriting their SOPs to reflect the new digital process — reducing manual procurement steps from 18 to 10 (44% reduction) and eliminating all paper-based approval bottlenecks.

- Digitised the client's SCM direct materials workflow within InLumin, enabling the SCM team to eliminate recurring manual tasks and redirect 20% of their daily capacity toward strategic supply chain initiatives — demonstrating measurable ROI beyond procurement into operations.
- Built user training materials and post-launch support frameworks that sustained adoption post go-live, coordinating with implementation teams to resolve issues within agreed SLAs.

Product Innovation

- Designed configurable workflow engine for InLumin enabling flexible process customisation across diverse organisational structures without requiring engineering changes, directly recognised with the 2025 Super Star Award.
- Conducted quarterly competitive analysis of enterprise SaaS platforms to benchmark capabilities, identify feature gaps, and feed findings into roadmap prioritisation cycles.

Project Management Intern | Elsevier – Bengaluru, India | *October 2022 – March 2023*

- Designed and presented a strategic plan to embed Responsible AI into Elsevier's Data Science & Life Sciences (DSLS) department — covering governance model design, risk assessment frameworks, and an implementation roadmap — that was adopted as the department's AI governance foundation.
- Benchmarked Responsible AI practices across Elsevier's key Life Sciences SaaS competitors, identified gaps in Elsevier's current model documentation, and proposed updates to data and model cards aligned with industry best practice.
- Proposed a new governance model for the Data Privacy & Responsibility (DPR) process and led a workshop and walkthrough session for data scientists, translating abstract AI policy into concrete team practices.

Management Intern | Testwin | *June 2022 – July 2022*

- Built a complete project management framework for the operations team — including WBS, SOPs, Gantt chart, and priority matrix — from scratch, improving execution visibility across active projects.
- Designed user flow diagrams and a service blueprint to surface UX friction points and propose UI improvements, contributing directly to product usability enhancements.

EDUCATION

Welingkar Institute of Management – Bengaluru, India

PGDM: CGPA 8.71 | 2021–2023

Seth Jai Parkash Mukand Lal Inst. of Engineering & Technology – Haryana, India

BTech, Mechanical Engineering: 76.6% | 2016–2020

CERTIFICATIONS

AI, Product & Agile

- PM School - Product Management Certification
- Prompt Engineering for Generative AI
- Advanced Jira - Atlassian
- Lean Six Sigma Green Belt – KPMG US

HONORS & AWARDS

- **Super Star Award** — Arcolab (2025-26): Recognised for designing the configurable workflow engine in InLumin, enabling cross-org process flexibility without engineering rework.
- **Silver Laurels** — Arcolab (2023 & 2024): Awarded for successful go-to-market launch of InLumin (95% adoption) and on-time, zero-disruption TrackWise enterprise rollout.
- **Bronze Laurels** — Arcolab (2024): Recognised for cross-functional collaboration and on-schedule product delivery across multiple concurrent enterprise initiatives.
